ARE YOU GETTING THE MOST FROM YOUR PROJECT MANAGEMENT INVESTMENT?

Technology is now playing an increasingly key part in the efficiency and profitability of most businesses. Alpha Corporation's Technology Health Check is an easy way to assess the strengths and weaknesses of your project and program management environments to determine and optimize their full potential.

Our Health check approach has been used successfully in assessing the status and applicability of many customers' enterprise environments, both large and small and has been proven to be a critical input to plans and budgets. It can also be used tactically to prepare for fast action backed up by information that is meaningful to all stakeholders.

As consultants that have executed this service across numerous PM systems in the past, we are uniquely placed to understand and evaluate the functionality you are striving to achieve and to optimize that functionality in a solution tailored to drive project and program success in your organization.

The objective of our Health Check is to determine how your current PM technology can be best utilized to meet the challenges facing your business, including the development of supporting processes and procedures. Interviewing key division personnel as well as examining the current PM system configuration and process documentation will be the means to accomplish this.

Benefits:

◊ *Dedicated industry and technical experts delivering an Independent report*

◊ *Best practice recommendations*

◊ *Maximise the ROI on your project and program management investment*

◊ *Realignment of PMO goals with company direction*

◊ *Utilize your current systems more effectively to improve business performance*

THE HEALTH CHECK PROCESS:

1 Analysis of the Organizational Environment
This first and very important step of the Health Check is geared toward ensuring that the organization is ready to continue to "change" and to ensure that the sustaining sponsorship is apparent.

2 Analysis of the Roles in the PM Environment
The 2nd step is intended to determine the shape of the PM environment based on the determination of the individuals in the organization who have a role and responsibility in the environment. Any inconsistencies will be noted and analyzed.

3 Analysis of the Project Management Processes and Procedures
This step of the Health Check is intended to determine the effectiveness of the PM environment based on the availability, and use of, documented processes and procedures.

4 Analysis of the Project Management Tool Suite Configuration
The final step in the Health Check process calls for an examination of the Project Management tool suite configuration to determine if any changes are required. The design/configuration documentation will serve as the primary input in this stage

5 Deliverables
Alpha will provide you with its findings and recommendations for action to achieve your Project Management objectives. These recommendations will include the party responsible for implementing the recommendation, i.e., Client, Alpha, or both, as well as an effort estimate for its implementation.

Alpha Corporation's Technology Service Group offer full consulting services spanning the entire Project and Program Management lifecycle, from initial design through to implementation, integration, customized training and ongoing post-implementation support and health checks.
