

The provision of consulting and training services for Project and Program management software implementations is an integral part of Alpha Corporation's project solutions. Alpha offers a robust variety of consulting services ranging from health checks and best-practice consulting to assist with product implementation, data migration/conversion and integration with other applications. We are also a provider of customized and certified training classes and ongoing support. Alpha is uniquely qualified to draw upon the experience of managing 4000+ projects for the owners and contractors we are proud to have worked with.

Our proven methodology helping organizations and companies benefit from their project, risk, cost and contract management technology investment is designed to:

- ◇ Evaluate, optimize and integrate existing technology to align with the clients' current business needs;
- ◇ Implement fit-for-purpose software as the backbone of the organization's contract, portfolio and project management;
- ◇ Implement comprehensive project metrics, Earned Value analysis, and tailored reporting systems;
- ◇ Assist clients in maximizing the value from risk and cost management tools;
- ◇ Maximize the value realized from existing project management technology; and
- ◇ Train project management and project controls staff through role-based programs customized to your business needs.

Our depth of knowledge as an operational "hands on" consulting firm delivering full Program and Construction Management, Project Controls and Engineering services coupled with our advanced expertise in the technical and functional aspects of Project Management technologies has prompted many public and private companies to retain Alpha services in this specialized field.
